

Ribbon Blender

Custom Designed Mixing Elements for Complete Blending

Designed to provide the type of mixing that your product requires with the capacity of the blending system based on your process requirements.

The SSi ribbon blending systems are suited for hot or cold products to provide employee protection and eliminate condensation above the product discharge zone.

- 
- Capacity from 50-2000 gallons
 - Multiple mixing element designs available based on the product being blended and the type of agitation required
 - Double-wall construction eliminates exterior condensation that can drip into the discharging product
 - Sanitary Dairy 3-A quality in all aspects of the design and workmanship
 - CIP tank cleaning options are available
