

Waterfall Topping Applicator

Continuous Flow or Intermittent Flow with Multiple Recycle Options

Designed to address many of the shortcomings of similar products on the market. Multiple topping recycle options are available to provide greater yields. Continuous flow of topping is the traditional system for topping application, and intermittent topping flow is available to reduce topping recycle. Additional yield improvements can be achieved with topping flow shaping options.

- Belt and rake widths designed for single, or multiple lanes to fit your processing needs
- Designed to eliminate water retaining surfaces
- Multiple options available to eliminate issues associated with topping belt tracking
- Rapid assembly and disassembly without tools
- Works with products from grated, dices or shredded cheeses to meats and vegetables. IQF or refrigerated
- Adjustable height product level, and adjustable nose bar height
- All stainless steel construction and components. Sanitary welds and cleanable design
